Checkpoint 16   Jacco   10-01-2022   ☺

Kolev, Kristian K.M.   4 days ago

Today I showed all the progress I have made during the holidays. I explained that I am missing only one functionality from the frontend. I made a lot of frontend work and just completed JWT for the backend. We discussed what is left and decided on some prioritization. First I need to complete JWT on the frontend, then do Docker and finally some Unit Tests.

Checkpoint 15   Frenk   17-12-2021

Kolev, Kristian K.M.   a month ago

During this meeting we discussed my fix for the documentation. It is no longer shallow. I also showed how my code would work in the backend. We did some debugging and found a me being stupid mistake.

Checkpoint 14   Frenk   09-12-2021

Kolev, Kristian K.M.   a month ago

In this meeting we discussed 2 topics. The first one was regarding the documentation I had submitted for the sprint. Frenk explained where the issues with my documents are and why they are shallow. He gave me tips how to fix them and I will do that. The second topic we discussed was the issues that I have for the JWT. We went through the code and made some minor changes but for now I can ignore the login and focus on my screens so I can have a functioning web application at the end of the holiday.

Doing ok, but by now I would have expected connection FE -> API -> DB to work together. Let's talk about what's happening in your project.
* Research document: It's ok, but I would like you to go a bit deeper into the pro's and cons of a certain framework. In terms of motivation, it might have helped to pick a topic which is actually an "unknown" in your project.
* No database yet
* No test plan yet
* CI seems to be running, but no Sonarqube yet (I saw your notes regarding the CI issues. Maybe including Docker already will help for you)

Checkpoint 12   Jacco   18-11-2021   ☺

Kolev, Kristian K.M.   2 months ago
During this meeting me and Jacco discussed my progress for the past two weeks. Me and him were a bit worried about how I was doing but I showed that for these two weeks I focused completely on the individual project and made some significant progress and Jacco was satisfied and said that I am on the right track.

In this meeting I showed my C4 diagram. I need to adjust some parts that were confusing and now I know how to. I showed how I organized my project and backlog structure. We talked about my CI and how Unit tests work. I have to look more into that so I have a deeper understanding of what I actually have to test. I showed progression on the frontend and explained how it works with the backend.

Checkpoint 10   Jacco   18-10-2021   ☺

Kolev, Kristian K.M.   3 months ago
During this feedback I showed that I have taken the feedback into account and I have managed to fix my C3 diagram, added my git link and will now fix the project structure. I showed my progress on the frontend and how I dealt with the long-lasting bug in the previous sprint.

Checkpoint 9   Delivery sprint 2   14-10-2021   ☹

Login is there, but no other functionality yet. Maybe you thought about the design of your app well, but it's hard to judge from your design document. I know you have been struggling with a long-standing bug, but I feel like you have to catch up a little bit in the upcoming sprint. Pretty sure you can do so though!

* C2 diagram split in user/admin is ok, but was not really needed. In C3 it's getting confusing already.
* No C4 diagram. That's not necessary, but did you think about your design before starting to implement?
* Your project structure seems to be messed up: there is a backend folder which is empty? And the BE project seems to be on top-level?
* Couldn't find git link, please include it.
* CI seems to be in a timeout sometimes?
* Very basic FE with login.

Snoeren, Jacco J.P.H. (Teacher)   3 months ago
I was mistaken: Login is not there, but some GET statements are.

Checkpoint 8   Jacco   07-10-2021

Kolev, Kristian K.M.   3 months ago
In this meeting I showed my C3 level of the diagram and am on the right track, just need to finish it. We also tried to connect the frontend with the backend.

Checkpoint 7   Jacco   04-10-2021

Kolev, Kristian K.M.   3 months ago
During this meeting we discussed mainly the C4 diagram and the progress I've made on it. We took a look into the user stories and I explained what had to correct. I showed my top priority at the moment which is successfully linking the frontend with the APIs. After I complete the SAD document I will start working on the UML diagram to see the bigger picture.

Checkpoint 6   Onno   04-10-2021   ☹

Kolev, Kristian K.M.   3 months ago
During this meeting I showed my progress for the requirements document and discussed the user stories. I am going to modify the current ones and add a bit more. I explained that I am stuck on the part where I have to link my Angular frontend with the backend but I am working on fixing it. I need to continue working on the SAD.

Checkpoint 5   Jacco   23-09-2021   ☺

Kolev, Kristian K.M.   4 months ago
During this meeting we discussed the documentation. I can use the already existing functional requirements and transform them into user stories and add a more appropriate estimation and prioritization. I can create a backlog for my application. I added improvements to my APIs.

Checkpoint 4   Delivery sprint 1   23-09-2021   ☺

Marsman, Onno O.H.M. (Teacher)   4 months ago
* How do your estimations fit within an agile way of working?
* How does your prioritization fit within an agile way of working?
* How do your user stories map to your functional requirements? Are the three user stories all your users want?
* Code looks good for now, I like the split in controllers.
- You don't have a lot of estimations

Checkpoint 3   Onno   17-09-2021

Kolev, Kristian K.M.   4 months ago
During this meeting we discussed my progress in the documentation for the individual project. I need to rearrange the functional requirements in a more logical way. I can remove some and I will add Introduction about the project so it is more explanatory. I did not have any questions regarding my Java code because it works.

Checkpoint 2   Onno   10-09-2021   ☺

Kolev, Kristian K.M.   4 months ago
During this meeting we discussed my idea for the individual track project. My idea is to create a web application that can be used by the staff in a restaurant and will have the same functionalities as a real one.
I will start by looking through the presentations for previous weeks and setting up a git repository.

Checkpoint 1   Jacco   09-09-2021

Kolev, Kristian K.M.   4 months ago
During this meeting we discussed my idea for the individual track project. My idea is to create a web application that can be used by the staff in a restaurant.
I presented my idea for functionalities and they were approved. The application will have the same ones as in a real application like different waiter accounts, inputting the order of a table, calculating bill, printing a receipt to a text document.
I will start by looking through the presentations for previous weeks.
